1. API to fetch Procedures added in an Encounter

This API can be used to fetch the procedures added in a particular Encounter.

URL:
https://ehr2.charmtracker.com/api/ehr/v1/patients/{patient_id}/encounters/{encounter_id}/procedures

Method: GET

Parameters:
{patient_id} - Unique identifier of the Patient
{encounter_id} - Unique identifier of the Encounter/Consultation

Sample JSON Output Response:
```
{
        "code": 0,
        "message": "success",
        "procedures": [
        {
                "code_id": "100000000000011007",
                "code_name": "Level 1 - New Patient Office Visit 10 mins",
                "code_number": "99201",
                "code_type": "Procedure",
                "item_charge": "210.0",
                "item_quantity": "1",
                "consultation_cpt_map_id": "100000000000011027",
                "modifier_1":"25",
                "modifier_2":"FH",
                "modifier_3":"",
                "modifier_4":"",
                "place_of_service":"11",
                "related_diagnosis_ids": [100000000000083738, 100000000000097382],
                "tax_id": "100000000000003783",
                "tax_name": "Sales Tax",
                "tax_percentage": "10.0",
                "tax_id_2": "100000000000003928",
```

```
              "tax_name_2": "Additional Sales Tax",
              "tax_percentage_2": "10.0"
      },
      { }
      ]
}
```

2. API to add/update Procedure(s) to an Encounter

This API can be used to add new procedures to an Encounter as well as updating an existing Procedure.

URL:
https://ehr.charmtracker.com/api/ehr/v1/patients/{patient_id}/encounters/{encounter_id}/procedures

Method: POST

Parameters:
{patient_id} - Unique identifier of the Patient
{encounter_id} - Unique identifier of the Encounter/Consultation

Sample JSON Input Specification:
```
{
      "procedures": [
              {
                      "code_id": "100000000000011007",
                      "item_charge": "210.0",
                      "item_quantity": "1",
                      "modifier_1":"25",
                      "modifier_2":"FH",
                      "modifier_3":"",
                      "modifier_4":"",
```

```
                "place_of_service":"11",

                "claim_comments":"Claim comments",

                "related_diagnosis_ids": ["100000000000083738",

                                         "100000000000097382"]

        },

        {

                "consultation_cpt_map_id" : "100000000000023463",

                "code_id": "100000000000011023",

                "item_charge": "20.0",

                "item_quantity": "2",

                "modifier_1":"",

                "modifier_2":"",

                "modifier_3":"",

                "modifier_4":"",

                "place_of_service":"11",

                "claim_comments":"Claim comments",

                "related_diagnosis_ids": ["100000000000083738",

                                         "100000000000097382"]

        }

    ]

}
```

Notes:
- If an existing Procedure in the Encounter needs to be updated, pass value for '**consultation_cpt_map_id**'. If not, it will be taken as a new Procedure to the Encounter.

3. API to delete a Procedure from an Encounter

URL:

https://ehr.charmtracker.com/api/ehr/v1/patients/{patient_id}/encounters/{encounter_id}/procedures/<consultation_cpt_map_id>

Method: DELETE
